

STRATEGY DESCRIPTION & HIGHLIGHTS

Our International Small Cap Equity Strategy seeks to invest in companies exhibiting above-average profitability and earnings growth trading at reasonable valuations. Exposure to these companies is gained through the purchase of American Depositary Receipts (ADRs) and U.S. listed shares of foreign companies. As a result, our clients have the opportunity to invest in companies in developed and emerging markets without the operational burdens inherent to owning ordinary shares. Our objective is to outperform comparable international stock indices over a full market cycle.

- *Efficient and cost effective method to achieve exposure to small cap international companies in both developed and emerging markets⁽¹⁾.*
- *A consistent and disciplined investment style.*

⁽¹⁾Renaissance determines an issuer's country classification based on company filings and data provided by third-party sources such as Bloomberg or FactSet. Renaissance considers an issuer to be located in an emerging market country if the issuer is domiciled or incorporated in an emerging market country (as defined by the iShares MSCI Emerging Markets ETF) or exhibits risk characteristics (e.g., economic, geopolitical and regulatory risks) similar to emerging market countries.

⁽²⁾Renaissance primary benchmark.

⁽³⁾Weights as of the end of the presentation period. Cumulative total weighting may not add up to 100% due to rounding of percentages to the nearest decimal place.

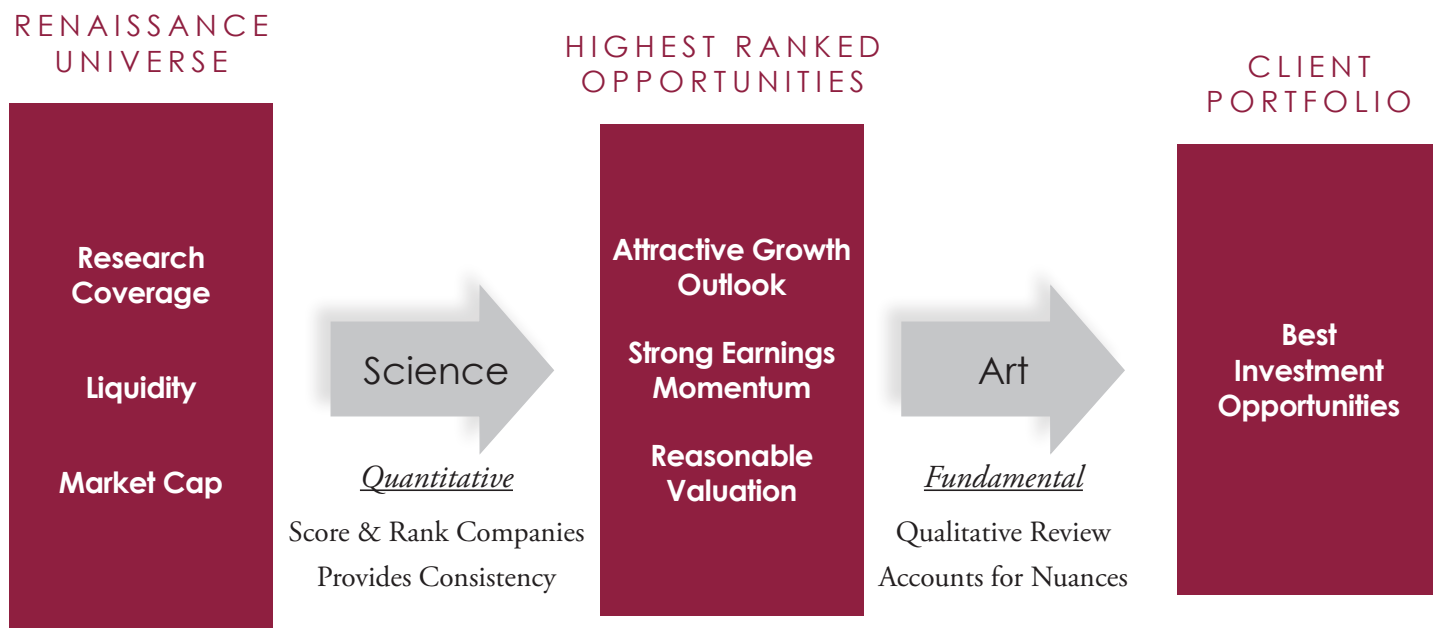

⁽⁴⁾Based on a representative account of the strategy discussed and shown as supplemental information to the GIPS compliant presentation. Portfolio characteristics (e.g., sector weights, valuation, growth rate) are based on a representative account that we believe is illustrative of the strategy. Characteristics and/or holdings may not be the same for all accounts invested in the strategy due to factors such as pending trades or account restrictions.

⁽⁵⁾Percentages may not match the actual difference between the representative account and the benchmark due to rounding of percentages to the nearest decimal place.

⁽⁶⁾Composite statistics based on gross returns calculated quarterly versus the primary benchmark. The calculation methodology for each statistic is available upon request.

FINAL 12/31/2020										

* Beginning August 1, 2015, "pure" gross-of-fee returns do not reflect the deduction of any expenses, including trading cost as these are wrap accounts. From November 1, 2005 through July 31, 2015, the disclosed returns are presented gross of fees as these are institutional accounts.
** Not meaningful figure due to five or fewer accounts invested for the entire year.
*** Firm Assets do not include UMA program assets for GIPS purposes.
As of 12/31/2020, Renaissance managed an additional \$2,177.1 million in UMA programs, totaling \$3,056.1 in assets under management and shown as supplemental information to the GIPS compliant presentation.

Renaissance Investment Management (RIM) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Renaissance has been independently verified for the periods from January 1, 2006 through June 30, 2020.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. The International Small Cap Equity Wrap Composite has been examined for the periods from January 1, 2006 through June 30, 2020. The verification and performance examination reports are available upon request.

Firm Definition: The Renaissance Group LLC, which does business as Renaissance Investment Management (RIM), is a registered investment advisor established in 1978, with an office in Covington, KY. RIM is an affiliate of Affiliated Managers Group based in West Palm Beach, FL. RIM manages equity, tactical, balanced and fixed income assets for a variety of clients including high net worth, institutional and sub-advisory relationships. A complete list and description of the Firm's composites is available upon request.

Composite Composition: The International Small Cap Equity Wrap Composite portfolios consist of approximately 45-55 equities exhibiting a combination of strong earnings growth, reasonable valuation, rising earnings expectations and profitability. The initial universe begins with all American Depositary Receipts (ADRs) and U.S. listed shares of foreign corporations with a market capitalization between \$100 million and \$3 billion. The International Small Cap Equity Wrap Composite, created on November 1, 2005, includes all fee-paying, non-wrap International Small Cap Equity accounts from its inception on November 1, 2005 through July 31, 2015. From August 1, 2015 to present, the International Small Cap Wrap composite includes all International Small Cap Equity fee-paying, direct-managed accounts with wrap fee arrangements and fee-paying SMA accounts that adhere to the SMA sponsor's inclusion guidelines. As of January 1, 2021, the composite was redefined to also include tax managed accounts which were previously excluded. The composite does not include non-fee-paying managed accounts. RIM will add new fully discretionary portfolios to the composite when they become fully discretionary based on the policies governing composite construction. RIM will exclude terminated portfolios from the composite after the last full month they were under management. Composite dispersion is measured using an asset-weighted standard deviation of returns of the portfolios.

Calculation of Performance Returns: Performance is calculated using total returns. Monthly composite performance is asset-weighted using beginning-of-period values. Rates of return are time-weighted with geometric linking of monthly returns. Valuations and returns are computed and stated in U.S. dollars. Account performance is based on total assets in the account, including cash and cash equivalents. Performance is actual performance.

RIM has chosen to present performance for pure gross-, gross- and net-of-fees. The pure gross-of-fees performance returns are presented before management and custodial fees and all trading expenses. The gross-of-fees performance returns are presented before deductions of management and custodial fees but after the deduction of all trading expenses. The net composite performance returns prior to July 31, 2015 are presented after deducting a model fee of 300 basis points from the gross return, which is the highest wrap fee represented by any RIM composite. The net composite performance returns from August 1, 2015 through present are presented after deducting a model fee of 300 basis points from the pure gross return. Wrap fees and fees in lieu of commissions, vary across brokerage firms and accounts based upon account size and other factors. The various bundled fees may include trading, management, custodial expenses and other administrative fees depending upon the wrap program selected. These gross- and net-of-fee investment results for the International Small Cap Equity Wrap Composite include reinvestment of dividends and other earnings. Clients' returns will be reduced by the advisory fee and any other expenses that may be incurred in the management of the client's investment advisory account. For example, if the gross annualized return of an account over a five-year period were 5.0%, deducting one twelfth of an annual advisory fee of 90 basis points each month on the ending monthly account balance would produce a cumulative net return of 22.7%. The cumulative gross return at 5.0% per annum over a five-year period would be 28.3%. A \$1 million starting portfolio would thus have an ending net market value of \$1,227,096, \$56,262 less than the gross return ending value of \$1,283,359. There is no minimum asset size for inclusion in the composite. RIM uses trade date accounting and income is accrued. Actual performance may differ from composite returns, depending on the size of the account, brokerage commissions, investment guidelines and/or

restrictions, inception date and other factors. After-tax results will vary from the returns presented herein for those accounts that are subject to taxation. Policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

Standard Deviation: The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. According to the GIPS Standards, this is not required for periods prior to 2011.

Investment Management Fees: Wrap fees, and fees in lieu of commissions vary across brokerage firms and accounts based upon account size and other factors. Wrap fee schedules are provided by independent wrap sponsors and are available upon request from the wrap sponsor. Total annual fees charged by wrap sponsors familiar to RIM are generally in the range of .75% to 3.00%.

Benchmark: RIM compares its composite returns to the Vanguard FTSE All-World ex-US Small-Cap ETF which seeks to track the performance of a benchmark index that measures the investment return of stocks of international small-cap companies. Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce performance. Market performance is based upon the midpoint of the bid/ask spread at 4:00 p.m. Eastern time (when NAV is normally determined for most ETFs), and does not represent the performance you would receive if you traded shares at other times. The ETF performance has not been examined. This benchmark is shown for comparison purposes only. We are not trying to explicitly manage to this benchmark. This benchmark represents holdings whose characteristics may differ from the composite portfolios; however, it tends to represent the investment environment existing during the time periods shown. The holdings of the client portfolios in our composites may differ significantly from the securities that comprise the index shown. Renaissance changed the benchmark retroactively as of 6/30/2020. The index has been selected to represent what RIM believes to be an appropriate benchmark with which to compare the composite performance.

Other: Performance data quoted in any Renaissance presentation represents historically achieved results and is no guarantee of future performance. Future investments may be made under materially different economic conditions, in different securities and using different investment strategies and these differences may have a significant effect on the results portrayed. Each of these material market or economic conditions may or may not be repeated. Therefore, there may be sharp differences between the performance shown and the actual performance results achieved by any particular client. The value of an investment may fall as well as rise. Please note that different types of investments involve varying degrees of risk and there can be no assurance that any specific investment will either be suitable or profitable for a client or prospective client's investment portfolio. Investor principal is not guaranteed, and investors may not receive the full amount of their investment at the time of sale if asset values have fallen. No assurance can be given that an investor will not lose invested capital. Consultants supplied with these performance results are advised to use this data in accordance with SEC guidelines. The actual performance achieved by a client portfolio may be affected by a variety of factors, including the initial balance of the account, the timing and amount of any additions to or withdrawals from the portfolio, changes made to the account to reflect the specific investment needs or preferences of the client, duration and timing of participation as a RIM client, and a client portfolio's risk tolerance, investment objectives, and investment time horizon. All investments carry a certain degree of risk, including the loss of principal and are not guaranteed by the U.S. government.

Risks of International Small Cap Equity Strategy: International Small Cap Equity Wrap Composite returns may show a high level of variability. In addition to market risk, the majority of any additional risk in these portfolios is related to specific stock selection, and RIM will have significant exposure to individual securities.
